

SAUNA

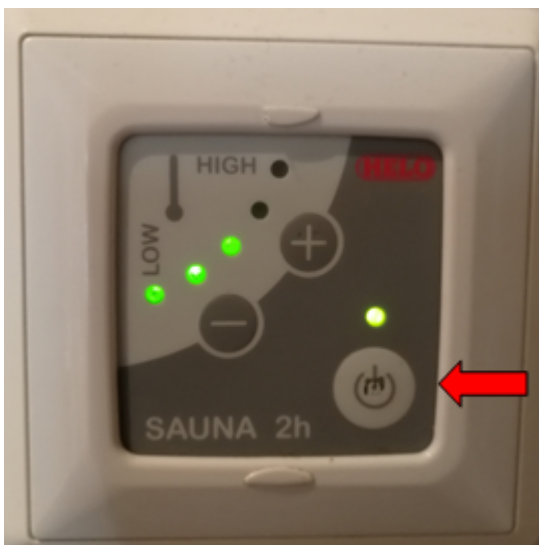

Switch the sauna on 15-20 minutes before use (picture 1). You can find the control panel on the wall in the hallway. Make sure there is nothing on the sauna stove. When there are 1 to 3 lights on in the panel, power for the sauna stove is suitable. If there are no lights on the control panel, make sure the switcher on the front panel of sauna stove is on the downright position (picture 2). Please, switch off the sauna after you have finished bathing. When the sauna is on, the room temperature will cool down.

PLEASE NOTE:

- Keep all belongings outside the sauna.
- Dry clothes and towels outside the sauna (in the drying cabinet).
- Keep the sauna heater clear at all times.
- Keep the bathroom door closed while showering or using the sauna. Steam may trigger the fire alarm.

Do not place anything on or near the sauna heater. The costs of a false fire alarm will be charged to the person responsible (from €200).
